Becoming a green park again

The regeneration park logo, a combination of two different logos symbolizing regeneration and forest, represents an eco-friendly ecological park created by regenerating a space that is not used anymore.

The Gyeongui Line Forest Park is a place that connects the past and present and provides citizens with a rest area where both the city and a forest coexist.

Seoseoul Lake Park

From an abandoned water purification plant to an eco-friendly park for citizens

Opened in October 2009, Seoseoul Lake Park is an eco-friendly park created with the theme of water and regeneration at the site of the old Sinwol Purification Plant in Yangcheon-gu. Originally opened as the Gimpo Purification Plant in 1959, the plant was reopened as a rest area for citizens after 50 years, reborn as the largest park in southwestern Seoul with a total area of 217,946 m² and boasting renewed forest and hiking trails of Neunggolsan Mountain.

A green rest area for citizens in central Seoul

A garden of water and regeneration where the past, present, and culture coexist

An eco-friendly lake park opened after 50 years

Central Lake

The lake, which had been located in the center of the Sinwol Purification Plant, is a large lake of a scale that cannot be found elsewhere in Seoul with a circumference of over 19,000 meters. The lake has been preserved in its original state while the surrounding areas were transformed into green spaces.

Cultural Deck & Plaza

This is a deck designed to enable citizens to admire a view of the Central Lake and enjoy the Sound Fountain show. Located near various park amenities, it is a good place at which to rest.

Sound Fountain

This fountain, located by the Central Lake, operates as it detects the sound of airplanes passing over the park.
Period of Operation: May–Oct.
/ 10:00 a.m.–6:00 p.m.

Regeneration Garden

This garden, renovated from the facilities of the old water purification plant, is where silver grass grows and various attractions, such as a children's playground and a basin with running water, are located.

Mondrian Garden

This is an eco-friendly garden featuring the harmony of the vertical and horizontal, inspired by the technique of abstract painter Mondrian. This garden was created using the frame structure of the old water purification plant.

Media Art Waterfall

This is a wall fountain made by applying a water purification system that recycles the old sedimentation basin and a water circulation system that uses tap water. Images are screened over water flowing down the LED wall.

Open Grass Field

This grass field, located behind the 100-person Table, provides an expansive view that is open on all sides. Here, the water pipeline used at the old water purification plant is displayed as a sculpture.

100-person Table

This long dining table, recently remade with wood, can accommodate up to 100 people at a time. Its roof provides shade for pedestrians.

Open Field

A grass field located on the way to the Central Lake. The trail stretching along the side road of the field leads to Neunggolsan Mountain that boasts a gentle slope.
