## Recommended Routes

**● Scenic Route**  
 This is a route for a leisurely walk along the Hangang River to appreciate the riverscape in a peaceful atmosphere.

**● Meditative Route**  
 This is a route for reflection on the past and present of the park that was renovated from an abandoned purification plant.

## A Garden of Water that Embodies the Beauty of the Hangang River

# Seonyudo Park

From an abandoned water purification plant to an eco-friendly ecological park

Seonyubong, a small mountain peak located in the middle of the Hangang River, was a place praised by artists and poets for its striking scenery. However, during the Japanese colonial period, the peak lost its original form and was used as a water purification plant to supply tap water to the southwestern part of Seoul from 1978 to 2000. Later, the peak, now called “Seonyudo,” was regenerated as an eco-friendly ecological park in April 2002, providing a variety of attractions and entertainment.

From an abandoned water purification plant to an eco-friendly ecological park

Keeping old space old, empty space empty

Becoming an island with a beautiful landscape again

### Water Purification Basin

A water purification garden created by recycling a chemical sedimentation basin. This is a place where visitors can observe the growth of various aquatic plants that purify water and their purification actions.

### Aquatic Botanical Garden

A water purification garden created on a recycled filter basin. This space allows visitors to observe various aquatic plants and their growth up close.

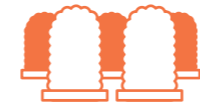

### Story Hall of Seonyudo

Renovated from a water pump room that supplied water produced at the water purification plant, the building is currently in use as an exhibition space.

### Four Circular Spaces

This is a complex cultural space created with recycled thickeners of the water purification plant. The space is currently composed of the Environmental Experience Yard, Environmental Classroom, Amphitheater, and restrooms.

### Garden of Green Columns

This garden was created by removing the concrete roof of the cleaning bed and leaving only its columns. Now, the garden is a rest area surrounded by green columns covered in ivy.

### Garden of Transition

A garden created by recycling a chemical sedimentation basin. It consists of various gardens decorated with different themes such as the Aromatic Plant Garden, Vine Plant Garden, Colorful Garden, and Sound Garden.

### Seonyugyo Bridge

A pedestrian bridge that crosses over the Hangang River into Seonyudo Park and commands a beautiful view of Seoul, including Bukhansan Mountain.

### Seonyujeong Pavilion

A reproduction of the old Seonyujeong Pavilion that invites visitors to experience ancient Koreans' taste for the arts. It is also a rest area that is home to a view of Inwangsan, Namsan, Bukhansan, and Dobongsan Mountains in the distance.

### Seonyugyo Observatory

This observatory is a good place for relaxation and meditation against the scenery of the Hangang River and grass fields. It also offers a panoramic view of Seoul.

## Seoul's parks for you and me Etiquette for everyone

- Protect the precious grass, plants, monuments, and facilities
- Use the park facilities cleanly
- Do not bring food or cook
- Refrain from smoking, drinking, and being noisy
- Refrain from riding bicycles, scooters, etc. for safety
- Keep your pets on a leash and clean up after them

### Seonyudo Park

 Green Bus - 5712, 5714, 6712, 6716, 7612  
**Parking Information** Available in the park only for the disabled

### Becoming a green park again

The regeneration park logo, a combination of two different logos symbolizing regeneration and forest, represents an eco-friendly ecological park created by regenerating a space that is not used anymore. The Gyeongui Line Forest Park is a place that connects the past and present and provides citizens with a rest area where both the city and a forest coexist.
